

ABSTRACT:

This data receiver (1) is intended to receive many digital programs coming from the Internet, for example. This receiver comprises a plurality of program receiving devices (40, 41, 42, 43, 44, ...) for receiving programs according to a pre-established criterion. A remote control box (32) displays a part of the programs. A shift of this list clears 5 and loads one of the receiving devices on the basis of another program.

Application: TV Internet channel reception.
